

Yuhan JIANG

jiangyuhan415@whu.edu.cn

EDUCATION

Wuhan University, M.A.

CHINA, 09/2021- present

- Department: State Key Laboratory of Engineering in Surveying, Mapping and Remote Sensing
- Major: Cartography and Geographic Information Systems
- Course: Geographic information theory and technology(A+), Aerospace photogrammetry(A), Smart city(A), Natural language processing technology(A), Numerical analysis(A-)

Wuhan University, B.S.

CHINA, 09/2017-06/2021

- Department: School of Remote Sensing and Information Engineering
- Major: Remote Sensing Science and Technology
- GPA: 3.84/4.0 (Grant direct admission to graduate school)

Hong Kong Polytechnic University, Summer school

HONGKONG, 06/2019-07/2019

- Department: Department of Land Surveying & Geo-Informatics
- Course: Mobile GIS & Location-based services(A), Spatial big data analytics(B+)

PUBLICATIONS

Papers

RESEARCH EXPERIENCE

Map retrieval intention recognition

06/2021-present

- Drawing on relevant feedback data, this research aims to enhance the retrieval accuracy and assist the discovery and utilization of resources in an intention-driven way. In my undergraduate thesis, titled "WMS Layer Retrieval Intention Recognition Considering Map Features and Semantic Attributes", this issue was addressed by DBSCAN. [\[PDF\]](#)
- Currently, the hypergraph segmentation method is being employed to further optimize this research.

Spatial analysis of COVID-19

06/2020-10/2021

- This study focuses on quantifying the spatial differences of COVID-19 cases in Wuhan utilizing social media data (Weibo). To achieve this objective, we employ Kernel Density Estimation (KDE) and Geographically Weighted Regression (GWR) techniques to explore the spatial distribution patterns of COVID-19 cases in Wuhan. Furthermore, we conduct a correlation analysis to investigate the potential relationships between the distribution of COVID-19 cases and environmental factors.

Simulation of grassland desertification

02/2020-06/2020

- I utilize NetLogo to comprehensively simulate the process of grassland desertification, considering environmental, climatic, and ecological factors. Four major models have been established, including a weather prediction model based on Markov chains, a grass growth model, a model for the life cycles of sheep and wolves, and a desert expansion model.

SCHOLARSHIPS & HONORS

- | | |
|--------------------------------------|--|
| ● National Encouragement Scholarship | ● Interdisciplinary Contest in Modelling, Honourable Mention |
| ● Outstanding Student Leader | ● Asia and Pacific MCM, Second Prize |
| ● First-Class Scholarship | ● Mathematical Contest in Modelling, Honourable Mention |
| ● Outstanding Graduate of WHU | ● The 8th "TipDM Cup" Data Mining Race, Second Prize |

OTHERS

- | | |
|--|--|
| ● Languages: Chinese, English (IELTS band 6) | ● Cert.: National Computer Rank Examination Level 4 Database Engineer |
| ● Programming languages: Python, C/C++, R, Matlab | ● Hobbies: Hiking, badminton, yoga. |
| ● Working Software: PyCharm, IDEA, ArcGIS | |
